

DEPARTMENT OF
CHEMISTRY

Postdoctoral Position at Indiana University, Bloomington

One NIH-funded postdoc opening is presently available in Prof. Yan Yu's laboratory in the Department of Chemistry at Indiana University, Bloomington. The group conducts research to develop nanotechnology-enabled tools to understand and control immune cell functions. More information about the group can be found at <https://yu.lab.indiana.edu/>.

Job summary: The main research project is to employ optical imaging and nanotechnology-based biophysical tools to investigate membrane organization and endosome functions in immune cells.

Minimum qualifications: Ph.D. in biophysics, chemistry, biochemistry, or any related discipline.

Ideal qualifications: Expertise in one or more areas in cell biophysics, membrane biophysics, super-resolution fluorescence microscopy, nano-bio interactions, or immunology.

A competitive salary along with a benefits package will be offered. The initial appointment for each position will be for 12 months. Additional 12-month extension will be available based on performance and/or availability of funds.

Interested candidates should send curriculum vitae, including names of 2 references, to Prof. Yan Yu at yy33@indiana.edu. Applications will be reviewed upon receipt.

The College of Arts and Sciences is committed to building and supporting a diverse, inclusive, and equitable community of students and scholars. Indiana University is an equal opportunity, affirmative action employer and a provider of ADA services. All qualified applicants will receive consideration for employment without regard to age, ethnicity, color, race, religion, sex, sexual orientation or identity, national origin, disability status or protected veteran status.
